Power and precision combine to perform the impossible

The brightest and most compact full featured fixture in it's class.

Super high output 600 watt white LED engine combined with a massive zoom range of 6° to 50° and compact size and weight sets this fixture in a class of its own. Super smooth full curtain framing, animation, CMY colour mixing and linear CTO is only a small taste of what this fixture offers.

Its silent operation makes this a perfect choice for any application where output and performance is critical.
