

Stops & Mops is a very young austrian company founded in July 2020. The story begins at the end of 2019 when its founders imagine a new way to generate beautiful beams. The idea is to model and shape beams using any lighting desk and with a digital video projector as a lighting source.

The first product – the Desk Dough® Beam, developed in 2020 – can be controlled and programmed like any other lighting fixture but is going well beyond analog and mechanical limits.

AV Stumpfl as a well-known Austrian company that designs, manufactures and markets a range of high-performance mobile and installation projection screens and media server software for professional and business applications contributes to the project the competencies in the field of software and hardware development and manufacturing as well as in international sales.

The german company loop light, well known for lighting and video design with much experience in operating and programming shows & events, in animation and film-production, media server & lighting board rental and installations, virtual pre-programming, interactive technology carries the competencies in the area of software development/functional scope as well as product design, product management and marketing.

Through the cooperation between AV Stumpfl and loop light competencies and know-how are available in all areas and are divided up accordingly.

The company Stops & Mops is an austrian company, headquartered in Wallern an der Trattnach. The Desk Dough® Beam is manufactured in the austrian headquarter.
